

THE FIRST PROFESSIONAL-QUALITY LAWN AERATOR DESIGNED FOR HOMEOWNERS!

Aerate your lawn in fall and spring for a greener, hardier lawn! The self-propelled DR® Lawn Aerator pulls 2"-3" plugs of turf, thatch, and soil at four-inch intervals as it travels across your lawn. It's easy to handle and navigates right around trees and obstacles. The holes left behind reduce soil compaction and allow for better absorption of water, fertilizer and nutrients. The result: a healthy root system that produces beautiful, robust grass.

DR LAWN AERATOR 8.00 FPT

Take your lawn to the next level with regular aeration. The DR is a pro-style coring aerator that pulls out 2-3" plugs, channelling moisture and nutrients to the roots.

SPECIFICATIONS

- **Engine:** 205cc Briggs & Stratton OHV 2-year warranty residential, 1-year commercial
- **Tines:** Cast iron, 3 (includes replacement core-punch ends)
- **Tine Spacing:** 4"
- **Tires:** 10" diameter
- **Weight:** 232 lbs Manual Start, 248 lbs Electric Start

CAST IRON CRANKSHAFT synchronizes the tines, ensuring evenly spaced cores. Each tine is angled to cleanly extract a 5/8" diameter plug of soil and automatically eject it.

EXTENDED-LIFE ENGINE The 205cc Briggs & Stratton OHV engine provides 8 Ft-lbs Torque to the cam shaft drive. Available in manual or electric start, these engines are manufactured for extended life and smooth operation, even after years of use.

GENTLE TURF TIRES Steel rims and solid rubber tires provide necessary traction without leaving behind treadmarks. Because self-propelled drive comes from the cams themselves, these tires can be smoother than on ordinary outdoor power equipment. The result is a neater looking lawn after aeration.

SELF-PROPELLED design sets a comfortable pace of 2.5mph as soon as you engage the bail handle. Power from the engine is focused on the unique cam engine that propels the unit and drives the coring tubes. Maneuverability is easier than larger industrial units.

CUTS HUNDREDS OF TREES PER HOUR!

THE FASTEST, EASIEST WAY EVER, TO HALT THE SPREAD OF INVASIVE TREE SPECIES

Create fire breaks, clear trails, and fight back against invasive species like junipers, cedars, and mesquite. The TreeChopper™ attaches to the front of your ATV in just minutes after initial setup. Just drive into tree trunks up to 4" in diameter and the patented blades slice it off, leaving no stump or sharp edges for you or livestock to trip over. A steel guard keeps trees clear of the operator.

Much like a pipe cutter cuts metal with minimal effort, patented blades easily slice through tree trunks up to 4" thick!

5 BLADES SHEAR OFF THE TRUNK If you've ever used a pipe cutter, that's the best way to explain the magic of the TreeChopper's design. First, two fixed "finder" blades guide the tree into the jaws of the TreeChopper. Next, rotating blades slice through the trunk. A trailing fifth blade leaves stumps flush to the ground.

AT LEAST 25 TIMES FASTER THAN A CHAINSAW To cut small trees using a chainsaw, you're forced onto your hands and knees, and you risk dulling your chain or injuring yourself if it hits the dirt. With the DR® TreeChopper™, you simply drive your ATV to within a few feet of the tree, line it up, and accelerate through the tree. That's it! There's no stooping or bending, and it's all done from the comfort of your ATV. Patented design fells trees safely out of the way.

CUTS FLUSH TO THE GROUND The DR TreeChopper leaves a stump as little as 1/4" high, so there's very little chance of the tree re-growing. Your cleared land is ready for immediate use.
